IX-DVM Mullion-Mount IP Video Door Station Features and Benefits

WDR Camera

Sun glare and silhouettes are no longer a concern.

Fixed 720p wide dynamic range camera with 170° horizontal view allows staff to identify visitors clearly and safely, regardless of the angle or location where the station is mounted.

LED Indicator Lights

Visual cues meet ADA regulations.

Call, communication, and door release indicator lights instantly display the status so deaf or hard of hearing visitors will know if the system is active and functioning as expected.

The sensor OFF indicator becomes lit if the touchless call sensor is disabled in programming.

Touchless Call Sensor

Requesting access has gotten cleaner.

Built-in touchless call sensor reduces the spread of germs, lowering risk in high-traffic areas.

Illuminated Call Button

Calling for access has never been easier.

A simple push of the brightly lit call button, quick and easy to see with its blue ring and bell icon, allows visitors to reach staff to request access.

Mullion Width

Slim style offers more flexibility with installations.

With its narrow stature, this station can be mounted in tighter locations than a standard station that requires a broader surface.

Microphone

Discreet, but integral.

When visitors request access, their voices are clearly heard on the inside station, allowing staff to determine intent before unlocking the door using an interior sub station or master station.

Low-Light LED

High-definition details, even at night.

The low-light LED illuminates when conditions are too dark for the camera, ensuring details of visitors are displayed or recorded.

Speaker

Sound clarity at its finest.

Crisp audio from the speaker ensures visitors will hear clear details and instructions without interference from outside ambient noise.

Card slot for microSD™

Simplified on-board recording with built-in slot.

Audio and video of visitor calls are automatically recorded to a microSD™ card (sold separately), located at the back of the station – even before calls are answered.

Aluminum Die Cast

Durability plus aesthetics.

Designed to withstand everyday use at busy entrances, this modern station offers longevity against nicks and scratches, keeping it looking sleek and new.
