BOSCH

Invented for life

- ▶ Choice of 36x or 28x day/night cameras with 550 TVL, 12x digital zoom, and wide dynamic range
- ▶ Sodium Vapor White Balance mode restores objects to their original color
- ▶ Robust design rated to an industry-leading IP68
- ▶ Advanced privacy masking and Image stabilization
- ▶ Complete series of mounting accessories; various mounting positions, including on-site canting

The MIC Series 550 camera combines cutting-edge technology with the latest production techniques to provide a class-leading feature set in an economical package. The MIC Series 550 range takes high quality surveillance to new levels of excellence.

As a best-fit camera for virtually any security application, it can be installed in the harshest of environments. Thanks to its IP68-rated aluminum casing, the MIC Series 550 camera functions perfectly in the most demanding conditions. This tough and vandal-resistant casing provides protection from the elements and physical attack. An integrated long-life silicone wiper and a reversible rain shield ensure high quality images regardless of the installed environment. The brushless-motor technology offers ultra-reliable operation with full 360° continuous rotation pan and 270° tilt control for exceptional viewing capability. Small increment pan speeds from just 0.2° per second to 120° per second gives the user precise control. This speed control is especially important when used with video analytic systems, particularly for tracking subjects when fully zoomed in.

The MIC Series 550 camera incorporates Bosch's standard controller interface supporting familiar AutoDome on-screen menus. This enhancement makes

it simple to integrate and use the MIC Series 550 within systems that already use Bosch AutoDome cameras and systems.

System Overview

Subjected and certified to rigorous IP68 dust and immersion tests, MIC Series cameras are perfectly suited for installation in even the most unforgiving environments, eliminating the need for pressurization. The cameras are machined from solid aluminum and protected from corrosion by two different processes: first, they receive a coating of Alodine 5200, a chromate conversion coating of aluminum that is used in the aerospace and defense industries where a protective layer is required to improve corrosion resistance. Second, they receive a robust, powder paint coating. The cameras are sealed with 'O' rings and can operate submerged in up to one (1) meter (3.3 feet) of water for sustained periods of time [a maximum duration of 24 hours]. (They are not rated to be installed permanently under water.)

Various mounting options, including on-site canting
The MIC Series 550 camera features twist-lock on-site canting functionality. This allows the camera to be installed upright, inverted, or canted (at a 45° angle)

to achieve the perfect field of view. No matter the installation position, the camera will operate faultlessly.

Integrated wiper

Regardless of the weather, the MIC Series 550 camera is able to capture the highest possible quality image all year long, thanks to its integrated, long-life silicone wiper.

Multi-protocol operation

Compatible with a multitude of protocols, including Bosch “Biphase (OSRD),” “Bilinx,” and Pelco “P” and “D,” the MIC Series 550 camera integrates seamlessly with existing security systems.

Applications:

- General CCTV
- Town centers
- ANPR systems
- Vandalism prone areas
- Extreme environments
- Rapid deployment
- High security
- Prestigious developments
- Broadcast
- Marine/coastal
- Architectural

Functions

High-performance PTZ day/night cameras

Image control and quality are integral aspects of any PTZ camera, and the MIC Series 550 camera delivers. The camera is available with a choice of 28X or the industry-leading 36X optical zoom lens, and offers a full 12X digital zoom. Both camera options provide 550 TVL of horizontal resolution for outstanding clarity and image detail. The cameras also incorporate technology that dramatically improves the dynamic range by 128 times. Also known as Wide Dynamic Range (WDR), it results in clear image reproduction in extreme high-contrast environments. The AutoScaling (proportional zoom) and AutoPivot (automatically rotates and flips the camera) features ensure optimal control. Day/night capabilities and outstanding sensitivity make the MIC Series 550 cameras exceptional performers in all lighting conditions. In low light, these cameras automatically switch from color to monochrome by removing the IR filter to boost sensitivity, while maintaining superior image quality. For operation in the darkest conditions, the SensUp control feature automatically reduces the shutter speed to as little as one second. This increases sensitivity by more than 50 times.

In addition to low light applications, the camera is also an exceptional performer when viewing under a sodium vapor lamp (for example, a street lamp or tunnel lamp). Images under these conditions normally have a yellowish tint, so the MIC Series 550 camera automatically compensates for the light from a sodium vapor lamp to restore objects to their original color.

With super-quick, 120°/60° per-second pan/tilt speeds, the MIC Series 550 camera outperforms other cameras in its class. The camera supports 99 pre-positions and two styles of Guard Tours: Preset and Record/Playback. The preset tour has capability for up to 99 pre-positions with a configurable dwell time between pre-positions, and can be customized as to the order and frequency each preset is visited. The camera also provides support for two recorded tours, which have a combined duration of 15 minutes of movements. These are recorded macros of an operator’s movements, including pan, tilt, and zoom activities, and can be played back in a continuous manner.

Superior privacy masking

The MIC Series 550 camera allows for a total of 24 individual privacy masks, with up to eight displayed in the same scene. Unlike conventional privacy masks, these can be programmed with three, four, or even five corners each to cover more complex shapes. Each mask changes size and shape smoothly and quickly, ensuring that the covered object cannot be seen. Each mask can appear in black, white, or blurred. Blurred is useful when privacy is an issue, but determining the presence of motion is still required.

Image Stabilization

As PTZ cameras continue to increase their optical zoom capabilities, image stabilization becomes critical to eliminate movement caused by unstable camera mounts. A mere quarter-inch of movement of the camera mount can shift the field of view by more than 6 m (20 feet) when the camera is zoomed to a high value. This can render images unusable. Image stabilization algorithms included with the MIC Series 550 camera reduces camera shake in both the vertical and horizontal axis, resulting in exceptional image clarity (pixel displacement up to +/- 10% for frequencies up to 10 Hz). Bosch’s unique image stabilization solution does not reduce camera sensitivity, unlike competitive systems.

Ease of installation and servicing

Bosch’s innovative software, the Configuration Tool for Imaging Devices (CTFID), allows technicians or operators to control the PTZ, change camera settings, and even update firmware from remote locations without need for additional wiring.

The MIC Series 550 camera has advanced built-in diagnostics to simplify service and minimize downtime. Using the On Screen Display (OSD), a technician can quickly and easily check critical parameters (such as internal temperature) to verify that the camera is functioning within acceptable operating limits.

Certifications and Approvals

Electromagnetic Compatibility (EMC)	Complies with FCC Part 15, ICES-003, and CE regulations, including EN50130-4 and EN61000-3-2 & 3-3 and EN55022
Product Safety	Complies with CE regulations, UL, EN, and IEC Standards 60950-1 & 22
Ingress Protection Rating	IP68 (1m submersion for 24 hrs)
