\*\*VTS-W16 NOT SHOWN

*Vitek Switchers are competitively priced Automatic Sequential Switchers designed to meet the needs of the small closed-circuit video system user and which allow two monitors to display the output of up to four, eight, and sixteen cameras in automatic sequence.*

*The scene from each camera is displayed on the monitor for an operator-selected interval of 0.5-30 seconds and may be stopped and a selected scene viewed at the operator's discretion. Unused camera positions may be bypassed without changing the order of sequence or the dwell time. The dwell setting and power switch are incorporated into one control.*

*Red LED lamps indicate the camera position being viewed.*
