

Extending Distance

If the distance of the POS system/cash register and GV-System is longer than 10 meters (32 ft), GV-Net boxes or GV-Net cards (a RS-232/RS-485 interface converter) are required in the connection. You can use two GV-Net boxes or GV-Net cards to connect one POS system to GV-System as illustrated below:

Note: For this connection, the maximum distance of RS232 is 10 meters (32 ft) while that of RS485 is 1200 meters (4000 ft).
