Time and Date Information. Time and Date must be set for the device to work properly. If time and date is not set, the device will record, but you will not get the fullest battery life and recording time.

1. Right click the Windows desktop
2. Go to "New"
3. Click "Text Document"
4. Rename the file as "settime"
5. Double click on the file to open it.
6. Enter the date and time as one line of information, bolded below.
   - The date should be in Year.Month.Day format and the time should be in military format
   - For example, May 23, 2013 at 2:30PM is written as **2013.05.23 14:30:00**
7. Save the file
8. Cut and paste the text file into the root directory of the memory card.
9. Insert the memory card into the device and then power on the device
   - Please note the update was successful if the text file is gone the next time you plug in the device to your PC
